

## Sciteline Partners with Think Research to Connect Patients with Clinical Trials Through its Leading Digital Referral Network

**TORONTO, July 19 2021** – Sciteline, a company focused on transforming clinical trials through digital software solutions, today announced a partnership with Think Research Corporation to connect patients to clinical trials through its pipeline into Ontario’s digital referral network.

Sciteline, a Toronto-based company that uses software to improve clinical trial efficiency and increase patient engagement during recruitment and trial conduct, will now allow senders on the digital referral network to refer patients into clinical trials. This means more patients across the province, regardless of location, will be able to remotely connect with clinical research teams in a timely and secure manner, improving the diversity of research, all while standardizing best practices.

Sciteline Co-founder Patrick Craib said, “This is a big day for Sciteline, and an even bigger day for removing barriers patients face in getting access to innovative methods of care and therapeutics in Ontario. For the first time, patients can now be electronically referred directly to a clinical trial as a care option by robust network of physicians and hospitals. This is going to greatly improve access and diversity in clinical research in Ontario, and we hope other provinces will follow Ontario’s lead.”

Think Research CEO Sachin Aggarwal said “The landscape of clinical research is changing, and it is imperative that we adopt innovative methods to improve the workflow of clinical trials and patient recruitment. Think is pleased to partner with Sciteline to allow more people to participate in clinical trials and streamline the process for both patients and researchers, from screening to follow-ups. This expansion shows the potential of our digital referral network and the ability for it to be scaled across other provinces.”

Sciteline continues to build innovative solutions and partner with industry leaders to support access and diversity in clinical research. This partnership builds on Sciteline’s ongoing work and suite of products, creating an end-to-end experience for patients and researchers conducting studies.

### **About Sciteline Inc.**

Sciteline combines creative thinking, robust research, and cross industry leadership experience to develop decentralized clinical trial solutions to help solve some of Canada's most challenging issues facing clinical research. Our mission is to accelerate the generation of new knowledge by enabling researchers to achieve their best work while connecting them with a diverse population of clinical trial participants. We believe that by reducing the patient burden and changing the status quo, we can lower the cost of delivering new treatments and medical devices to patients.

### **About Think Research Corporation**

Think Research is an industry leader in delivering knowledge-based digital health software solutions. The Company's focused mission is to organize the world's health knowledge so everyone gets the best care. Its evidence-based healthcare technology solutions support the clinical decision-making process, standardize care, and improve patient outcomes. For over a decade, Think Research's cloud-based, EMR-agnostic digital tools have empowered clinicians around the world and positively impacted millions of patients across the continuum of care – including primary physician care, acute care hospitals and surgical suites as well as community and seniors care. Think Research is proud to serve as a trusted health system partner to a rapidly growing, global client base that spans five continents and more than 2,800 healthcare facilities.
